

Field	Type	Description
type	messageType (1 B)	Message kind: tells the receiver how to parse data
length	uint8_t (1 B)	Valid bytes in data . Enables dynamic-length transmissions
checksum	uint16_t (2 B)	Packet integrity check against RF corruption (moved to plaintext header)
fcnt	uint32_t (4 B)	Frame Counter: anti-replay guard and AES-128 IV source (encrypted with data)
data	union (≤50 B)	Application payload. Structure depends on type (encrypted with fcnt)

*Only bytes $B0-B(8+length-1)$ are transmitted over the air. Unused trailing bytes in **data** are discarded before sending.*
